Mr. Rodney Anderson  
President  
ABC Mechanical Contractors  
14187 - 50th St. So.  
Burnsville, MN 55987

**Want to provide industrial water purification equipment  
start up and maintenance services to your clients?**

**WaterScience Service can help.**

Dear Mr. Anderson,  
You probably walk past water treatment equipment like the filter housing pictured to the right every day. You may even provide bids for water purification equipment. Yet when it comes to start up and maintenance, you most likely turn it over to someone else and lose precious dollars.

Now, by partnering with WaterScience Service, you can expand the services your company provides to include water purification equipment management, and recoup much of that lost income. Not to mention give yourself a competitive advantage by offering a specialized service many other mechanical contractors can't offer.

**WaterScience Service...the perfect solution**

WaterScience Service helps contractors, and engineering and construction firms on an on-call, contract basis. We supervise installation, manage water treatment projects and even act as commissioning agent overseeing projects from the schematic design phase through installation and offering ongoing monitoring after the equipment begins operating.

We can also train your people in the skills they need to service this equipment if you prefer that approach.

With 22 years experience in managing water purification equipment and systems, we are able to service most industrial water treatment models. We have experience in reverse osmosis, electro-deionization, media filters, and FRP and duplex softeners, to name a few.

And besides our technical expertise, here are a few things you will appreciate when you work with WaterScience Service:

- Our professional, customer-oriented service.
- Our management skills.
- Our flexibility and versatility.
- Our ability to handle crises.

I would welcome the opportunity to meet with you to learn more about your clients' water treatment needs, and how I can help you satisfy them. I will call you in the near future to discuss a good time to get together. Meanwhile, if it's more convenient for you, please feel free to call me at 952-431-7211.

Thank you. I appreciate your consideration.

Sincerely,

Mary Darud  
President

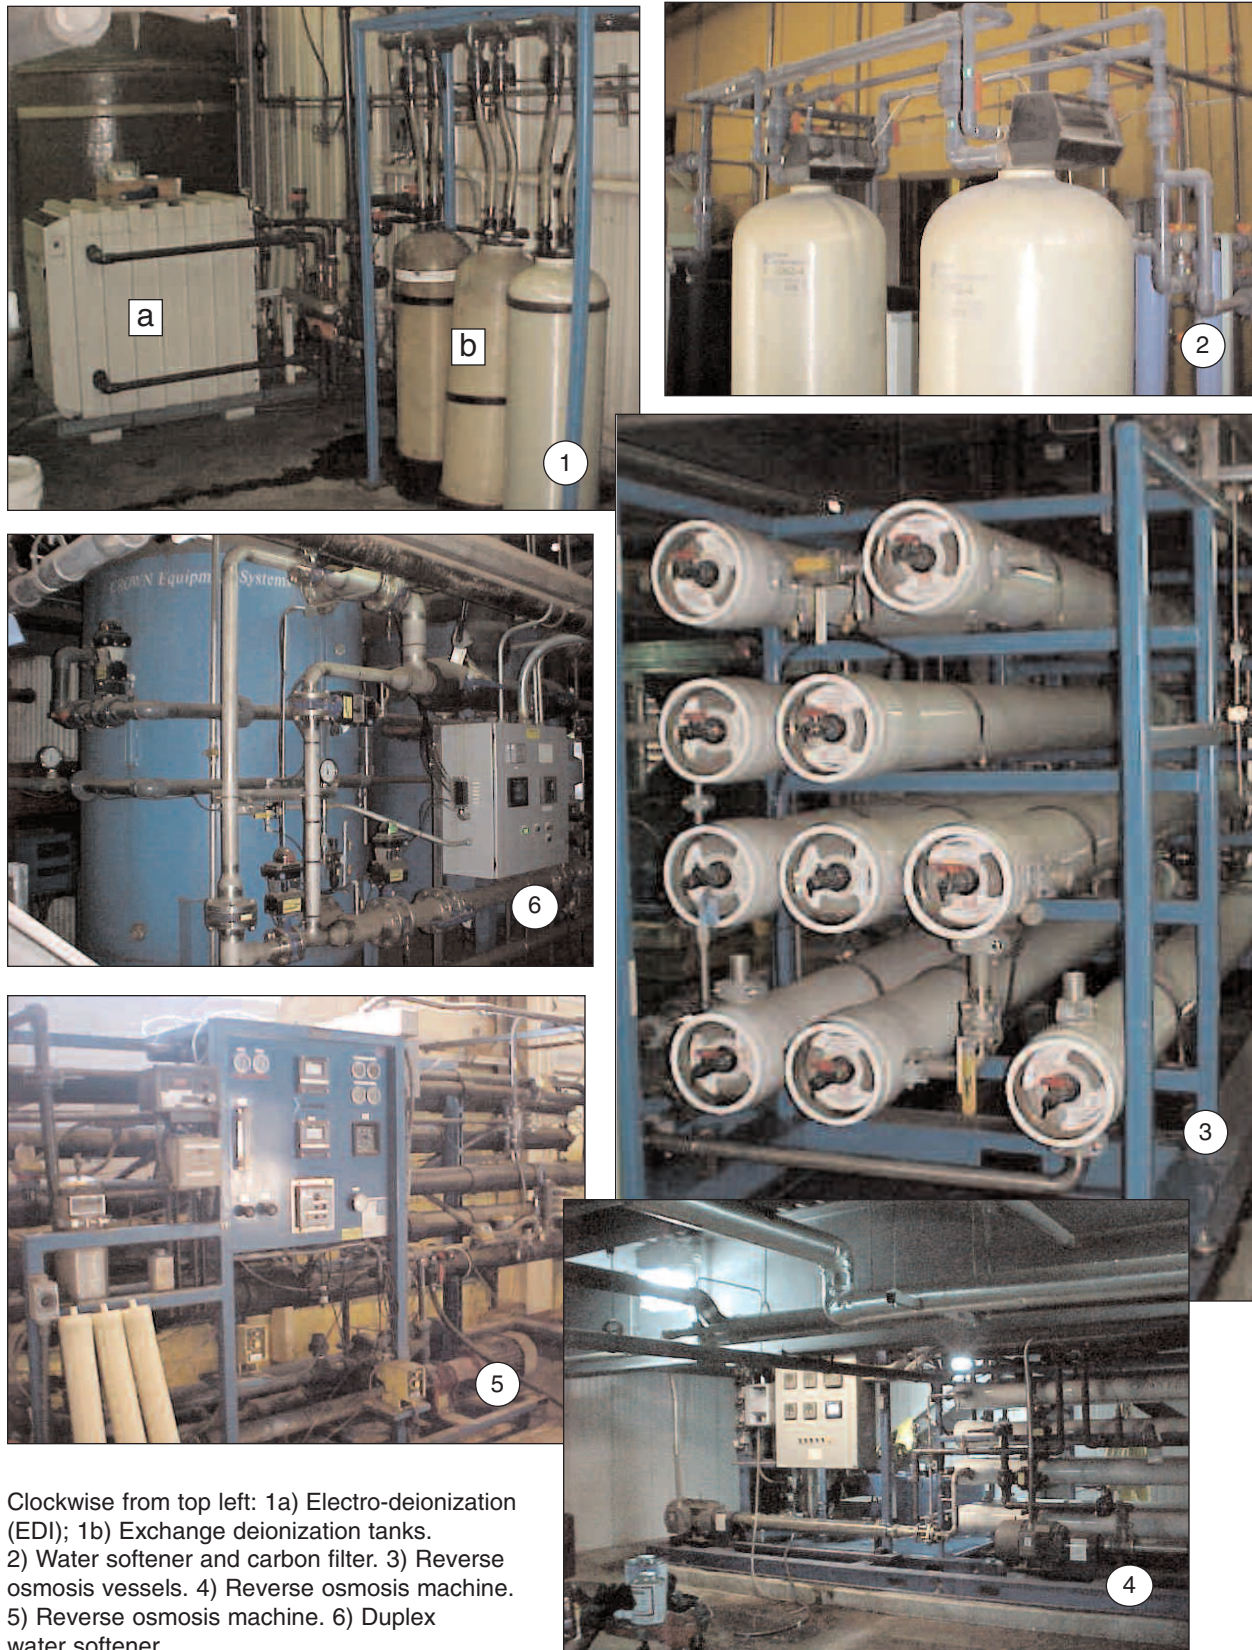

P.S. Here is some of the equipment I'm talking about. I suspect it looks familiar to you and you have often wondered how you could add it to your service list. I think you will find WaterScience Service the perfect solution.

Above: Multimedia filter.  
Right: Duplex water softener.

Clockwise from top left: 1a) Electro-deionization (EDI); 1b) Exchange deionization tanks. 2) Water softener and carbon filter. 3) Reverse osmosis vessels. 4) Reverse osmosis machine. 5) Reverse osmosis machine. 6) Duplex water softener.
